## Pro FST

### Fuel system treatment for petrol engines.

Pro FST protects against cold start wear and fuel system corrosion and helps to remove deposits from injectors, intake systems and carburettors ensuring optimum performance. It is very effective against carburettor icing in low temperature environments, and combats starting problems, stalling and rough running at low engine revs.

Pro FST may be used in leaded and unleaded fuel, for 2 and 4-stroke engines. It reduces the incidence of pre-ignition and also enhances the fuel's octane rating to a small extent.

Recommended mix ratio: 1-2% (100:1 – 50:1).

Pro FST is compatible with catalytic converters.
